

We design great products using professional tools

PROFESSIONAL TOOLS

With the professional use of Autodesk® Inventor®, we design, visualize and simulate for you the actual performance of our tables, as well as our racks, complete before their actual fabrication. Through Digital Prototyping, we are able to offer better services to customers, being able to integrate Autocad drawings and 3D data into a single digital model, creating a virtual representation of the final product, and thus carry out internally a greater number of activities.

WE OFFER A 360-DEGREE SERVICE

From design to implementation, we offer our clients a complete service and tailor-made, starting from design to delivery and assembly, offering perfectly functional solutions for each company. For us, each project is a reality in itself, so that we can offer our clients can original and exclusive product that meets their business needs.

THREE-DIMENSIONALITY FOR EVERYONE

We offer our clients a 3D scanning service, which thanks to the use of new technologies, to scanners of the latest generation allows us to convert into digital files, according to your needs, any object, component and detail, even complete with measurements and type of material previously used.

LISTEN TO FIND THE RIGHT IDEA

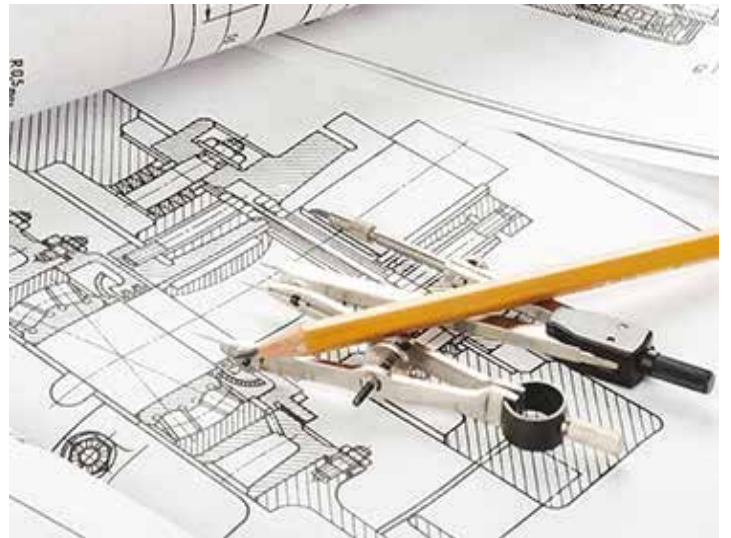

We believe that the best way to realize excellent projects is to devote time to listening to the needs and requirements of the client, to develop together a project that meets initial expectations and that surprises with our own original touch. We start with an initial idea, be it a rack, a control room or for any other need, which through discussion, is transformed into a concrete design and then into a finished product.

THE PROJECT TO SHAPE THE IDEA

The needs analysis and site survey make it possible to focus on the potential and constraints of a working environment, to ensure the complete customization of the technical furnishings and all those accessories that make up the control rooms. The technical knowledge and experience acquired over the years, allow us to best interpret the customer's needs and develop an exclusive project.

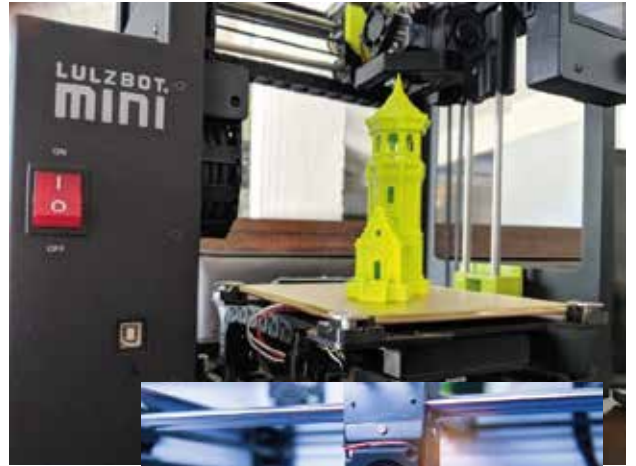

3D MODELLING TO SEE "THE IDEA"

From a simple idea, drawn on a sheet of paper, it is transformed into a model defined in dimension and space, with the use of three-dimensional modeling software.

CUSTOM PRODUCTION TO TOUCH WITH YOUR HANDS

Later what was a "simple" three-dimensional design begins to materialize, with a sartorial approach each unique, exclusive and customized product by the hands of experienced artisans who, transform Inventor's drawings into the finished product to perfection following even the requests of the customer. Not only that, starting from a three-dimensional file thanks to state-of-the-art 3D printers we can print any object.

INSTALLATION AND AFTER SALES TO CONCRETIZE AND MAINTAIN

The assembly of our technical furniture is carried by experienced and specialized in-house staff for artful results. Our products belong to those who commissioned them, but they will forever remain the products of the brand that created them. That is why the company offers its customers after-sales service that includes not only routine maintenance, to maintain their high quality, but also any repairs.
